

Business Continuity

Business is non-stop,

but things can come to a grinding halt. Fire, theft, data corruption, hackers or disgruntled employees are all real threats to any business.

An off site backup needs to be part of every good Disaster Recovery plan today. Separate Data & OS backups will provide:- Frequent daily backups of changing data and databases,

- Less frequent imaging of OS and Application states
- The ability to restore quickly, to the same or new equipment

Have a plan!

Know what risks your business faces, and know how you will deal with those risks.

Check your plans regularly, and change them if your business grows, your risks change or if you find a new tool to help minimize your risks.

Send us an email or give us a call. We'll get things started with an onsite consultation.

Together with our partners, Resource Management Innovations , we will evaluate the specific needs of your business and help you develop a plan for the continued success in your business, even in the event of a disaster.
